

Nessy Numbers Maths Challenge

Dear parents,

Lots of our children have problems telling the time from the basic o'clock, half past, quarter past and quarter to times to more complex timetable calculations. It is important that all children can tell the time both analogue and digital, work out intervals between times and read bus, train, airport time tables.

For this reason, our next challenge after Tables of Doom which has impacted well with all those children who took part will be Clock Island which is accessed in exactly the same way as Tables of Doom.

Meet Mr Hour and Mrs Minute. Help them repair Clock Island and defeat the gorilla robot - Burtzilla! The characters explain strategies that make telling the time much easier to understand. A range of different games help learn every aspect of time, from basic facts to converting digital time into the 24 hour clock.

Key Features

- Assessment game identifies what you need to learn
- Video learning strategies ideal for those who struggle with maths
- Games designed to develop different numerical skills
- Printable worksheets reinforce learning
- Interactive widgets ideal for group classroom activities
- Colour-coded records.

Don't forget you can now print off your certificates.

For anyone who has "lost" their monkey I am sure that Mrs. Hipkiss will be able to help them find it again or create a new one.

The login is still - **mustardbellow**.
